Abstract: It aimed to determine the performance of kumquat grafted onto different rootstocks in this project. For this purpose, Nagami kumquat (*Fortunella margarita*) is grafted onto different six rootstocks (Carrizo and Troyer citranges, Cleopatra mandarin, Volkameriana, Flying dragon and Rough lemon). In this study, some parameters such as seedlings and tree growth, fruit yield and quality, rootstock-scion rootstock scion compatibility was investigated in kumquat grafted onto different rootstocks.
